

NORTHWEST WOOD FLOORING

Sustainable Northwest Wood offers a full line of solid and engineered wood flooring that is grown and manufactured in the Pacific Northwest. We specialize in solid flooring in standard face widths of 3", 4", and 5", but offer many custom options including wide-plank styles, prefinished, and engineered flooring.

Our flooring is available in Select grade, a consistent look with minimal knots and uniform color tones. We also offer a Character grade option which showcases more of the knots, color variation, and spirit of the tree.

PEOPLE & PLANET

Our wood flooring is sourced from sustainably managed forests and salvage projects in the Pacific Northwest. We partner with small mills throughout the region to cut, kiln-dry, and manufacture the wood into the flooring for your project. Ask us where yours came from -- we can share the special story behind each floor.

AVAILABILITY
